

The *Call to Halt-19* letter cites five major concerns:

- DNA contamination posing cancer risks
- Presence of SV40 DNA sequences, raising genome integration concerns
- Batch-specific adverse events revealing manufacturing inconsistencies
- Ribosomal “frameshifting” creating unintended proteins with possible toxicity
- Repeated doses shifting immune response toward IgG4 antibodies, which are associated with immune tolerance and autoimmunity

What's new?

Since the letter was first published (Mar. 31, 2025), research has further confirmed these issues.

Anyone can add their signature of support!

As of March 2026, the letter has over 7,300 supporters, many of whom have posted comments.

Voices from across Canada:

“The issues addressed in the letter have not yet been acknowledged and resolved by Health Canada. People are still being told to get boosted and they are. This needs to stop.”

“It is incredibly important that citizens have the fullest information possible about risks, benefits and uncertainties of any intervention or procedure so that they can make informed choices related to their healthcare. This information was not provided with respect to the Covid-19 vaccine products.”

“Je considère que les dangers sont beaucoup plus nombreux que les bénéfices.”

“We have to start talking about this and facing the reality of these products.”

The Call to Halt-19 initiative recognizes the many Canadians who have been injured by the COVID-19 mRNA vaccines and the need for improved diagnosis, treatment, and support.

“I have seen much harm come from the vaccines in my patients.”

“As a healthcare professional that works with many vaccine injured people, I strongly agree that an immediate halt to these products is essential.”

“I, myself, have been injured by these injections. I don’t want to see anyone else suffer needlessly.”

“My kids got the vaccine and I’m worried about them.”

“I am concerned about the long-term effects of the vaccines.”

“I want an investigation into the mRNA shots and on the injuries they caused.”

The *Call to Halt-19* letter urges:

- **An immediate stop to COVID-19 mRNA products**
- **A public inquiry into their approval and use**
- **Research into potential health risks**

Signed by over 80 researchers and professionals in pharmacology, immunology, virology, pathology, chemistry, healthcare, statistics, and law.

Sent to federal and provincial representatives, chief medical officers, Health Canada, Public Health Agency of Canada (PHAC), National Advisory Committee on Immunization (NACI), and the House of Commons Standing Committee on Health (HESA).
